

What's New in 15.2

Included in DWOS Version 15.2 are features, enhancements, and improvements to help streamline your processes, customize your experience, and improve overall situational awareness. Features like the new **Presentation Mode** and **Batch Production Report** will improve transparency, while **Added Pricing Units**, and **Part-level weight input** will help tailor DWOS to your specific needs.

Presentation Mode

Presentation Mode is a new feature, designed to consistently keep employees and management up-to-date on workload and production. Presentation mode, like the Dashboard, is a simple, unique, and comprehensive tool to stay ahead of your production schedule. Presentation Mode continuously loops through all user-created WIP and Batch screens, as well as Dashboards, at a defined pace. The Presentation Mode cycle speed can be adjusted in the General folder in User Settings.

Lot by Weight and Each by Weight Pricing

These two new pricing units will enhance your ability to quote and process jobs with pinpoint accuracy. Gone are the days of pricing based on quantity alone. Now you have the option to quote and price based on part and order weight. This is an exciting new option for clients processing large quantities of small parts. The feature is enhanced further with the new option of entering part weight while in the Receiving dialogue.

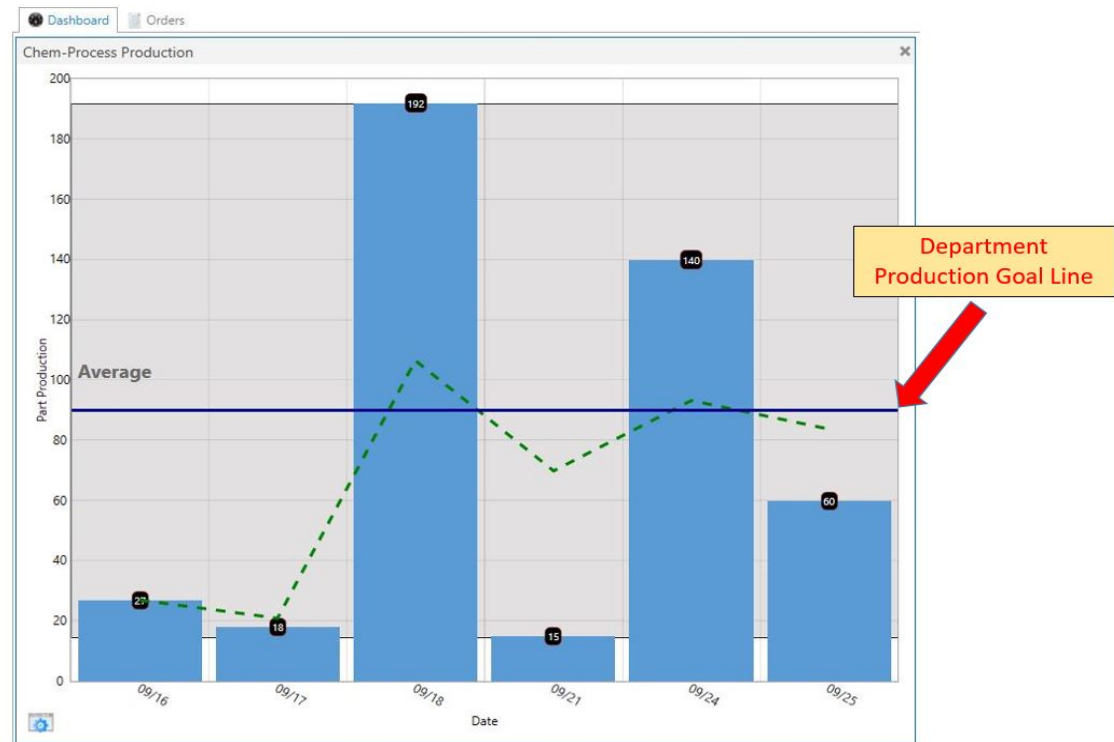

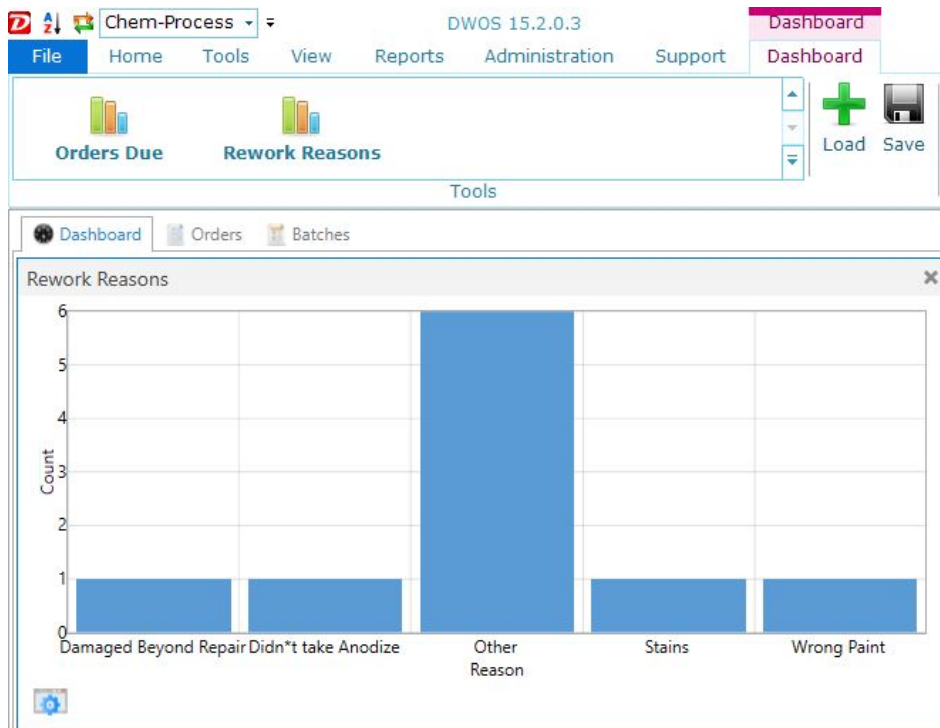

The screenshot shows a 'Work Order' form with various fields. The 'Unit' dropdown menu is open, showing options: 'Each', 'Each By Weight', 'Lot', and 'Lot By Weight'. The 'Lot By Weight' option is highlighted in blue. A blue callout box with the text 'New Price Unit Options' has two arrows pointing to the 'Each By Weight' and 'Lot By Weight' options.

New Price Unit Options

New Batch Production and Part History Reports

Also new to DWOS are the Batch Production and Part History Reports. The Batch Production Report will display information on batches ran within a specified date range. This data includes batch number, customer, order number, part number, date opened and date closed. The Part History Report provides date-range specific metrics for any part number previously processed. The historical data included in this report is customer, order number, order price, pricing unit, processing days, and whether or not the part required reworking.

New Batch Production and Part History Reports

Also new to DWOS are the Batch Production and Part History Reports. The Batch Production Report will display information on batches ran within a specified date range. This data includes batch number, customer, order number, part number, date opened and date closed. The Part History Report provides date-range specific metrics for any part number previously processed. The historical data included in this report is customer, order number, order price, pricing unit, processing days, and whether or not the part required reworking.

Part History

1042	Lockheed	2107	12345-3	60	Rack A	7/20/2015	7/20/2015

Batched Orders on WIP Screen

Another helpful enhancement to DWOS is adding 'child orders' to the WIP-Batch Screen. When viewing your batches, you are now able to display all orders within the batch by clicking the drop down menu to the left of the Batch ID. This will show all the batched work order numbers as well as any other desired order data without leaving the WIP screen.

The screenshot shows the DWOS 15.2.0.3 interface with the 'Batches' tab selected. The main table displays batch information:

Batch	Fixture	Orders	Parts	Surface Area
37		1	4	0 in ²
38	A-1	3	10	18,846 in ²
1043		2	115	10,610 in ²

Below the main table, a sub-table shows the details for the selected batch (1043):

WO	PO	Customer
2110	88	ABC Finishing
2121	753	Lockheed

Callouts indicate that clicking the expand icon for a batch (1043) reveals the 'Orders in Batch' list.

Additional Issues Resolved

- Added ability to add media in Order Processing
- Added Description field to Traveler, CoC, and Packing Slip
- Added Work Order and Sales Order invoicing prefixes
- Added printer programming language options
- Fixed signature issue on CoC
- Fixed CoC Work Order field length issue
- Fixed date in Control Inspection
- Fixed Pass/Fail reporting in Work Order Summary
- Fixed Time In/Time Out, Duration issue in Order Processing
- Fixed issue with Packing Slip omitting Customer data
